SUMMARY

Computer Science graduate with a focus in AI and Data, with hands-on experience in machine learning, NLP, data analytics, and data governance. Built end-to-end projects in health monitoring, cross-lingual NLP, and predictive modeling, alongside Co-op experience at GEA, and seeking an entry-level role in AI, machine learning, or data science.

EDUCATION

BSc in Computer Science (AI and Data)

Sep 2022 – Aug 2026

Prince Sultan University
GPA: 3.62/4.00 — Second Honors

PROJECTS

Smart+ — Campus Health Monitoring System

Aug 2025 – Dec 2025

Python, Streamlit, MongoDB, Pydantic, Gemini API

- Built a campus health monitoring platform that ingests wearable data, detects personalized anomalies, and routes alerts to doctors.
- Implemented 15 alert conditions across 5 medical specialties using personalized baselines and automated prioritization.
- Built a Streamlit doctor dashboard with live alerts, patient vitals, history, and alert management workflows.
- Integrated Gemini API and SMTP for patient-friendly explanations and automated notifications.

Cross-Lingual Word Embeddings

Jan 2025 – May 2025

Python, Gensim, FastText, Hugging Face, NLTK, CAMEL

- Trained 300-dimensional CBOW and Skip-gram embeddings across 4 Word2Vec/FastText architectures on an English-Spanish corpus.
- Applied CAMEL Tools for Arabic morphological analysis, extracting roots, stems, POS, segmentation, and grammatical features.
- Correctly matched 54.69% across 980 English-Spanish medical terms in cross-lingual alignment testing.
- Achieved a 0.724 Pearson correlation across 10,000 medical semantic-similarity evaluation pairs.

Saudi Used Car Price Prediction

Aug 2024 – Dec 2024

Python, Scikit-learn, XGBoost, TensorFlow, Pandas, NumPy

- Built an end-to-end regression pipeline using 5,363 Saudi used-car listings to predict prices from real-world market data.
- Preprocessed the dataset with categorical encoding, numerical scaling, and feature selection for model training.
- Compared 4 regression models: Linear Regression, Decision Tree, Neural Network, and XGBoost.
- Achieved a test R^2 of 0.893 with XGBoost, the best-performing model.

EXPERIENCE

General Entertainment Authority (GEA)

Jan 2026 – Jul 2026

Co-op Trainee

- Conducted a data governance gap analysis to assess GEA data assets against SDAIA National Data Index requirements.
- Translated business requirements into conceptual and logical data models for Investor and License portal modules.
- Developed C#/.NET backend services and containerized application components with Docker.
- Optimized MS SQL Server queries and database structures for backend workflows.

CERTIFICATIONS

IELTS Academic – British Council, Overall Band 7.0

Jul 2026

Parallel Programming in Java – Rice University

Aug 2025

Data Analytics Essentials – Cisco

Oct 2024

Ethics, Technology and Engineering – Eindhoven University of Technology

Oct 2024

TECHNICAL SKILLS

Programming: Python, Java, C#, SQL

Machine Learning & NLP: Scikit-learn, XGBoost, TensorFlow, Gensim, FastText, NLTK, Hugging Face, CAMEL

Data & Databases: Pandas, NumPy, MongoDB, MS SQL Server, Pydantic

Development: .NET, Streamlit, Docker, Gemini API

Tools: Git, GitHub, Jupyter Notebook, Google Colab
